PERMANENT
PAINT TREATMENT

ProTech[®]
MONTE-CARLO

Repulses
the elements

Latest generation paint treatment

Created by ProTech® Monte-Carlo, this treatment is the very essence of more than 25 years of research and development. It permanently bonds to the paint's natural structure to protect against ageing and deposits an active anti-adhesive and dirt-repellent coating.

Acting like a protective shield, ProTech® 3D+ treatment enhances your car's deep colour, bright shine and like-new look. Its repellent properties keep your car clean for longer and make cleaning effortless.

- + Certified results
- + Professional application
- + 5-year guarantee

Certified results

A treated paint repels water and greasy pollution.

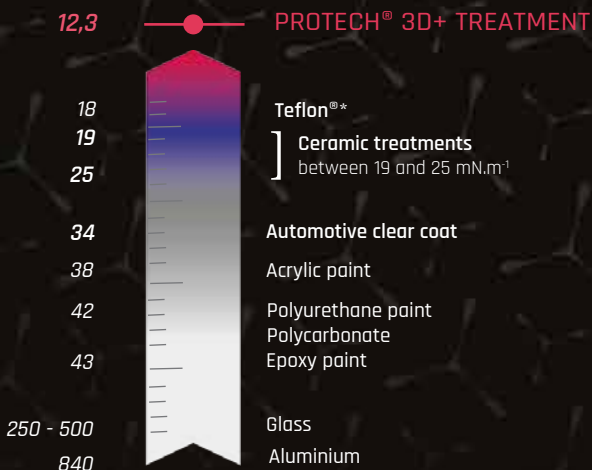

SURFACE ENERGY MEASURES

Surface energy is used to measure the adhesion of certain molecules on a material.

To determine the surface energy of our ProTech® 3D+ paint treatment, we used the OWRK method.

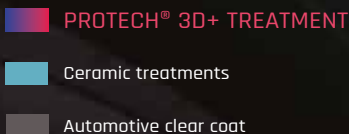

The results are unequivocal. A painted surface treated with ProTech® 3D+ has a very low surface energy, better than Teflon®* and ceramic treatments, that allows water and dirt to adhere less to the surface.

**Teflon® is a registered trademark of DuPont de Nemours, used by cookware manufacturers as a anti-adhesive coating.*

HYDROPHOBIC / OLEOPHOBIC MEASURES

A drop of liquid is deposited on a surface. The angle formed by the drop demonstrates the ability of the surface to repel the liquid. Hydrophobic effect for water, oleophobic for greasy. These measurements express the anti-adhesive and anti-dirt performance of the treatment.

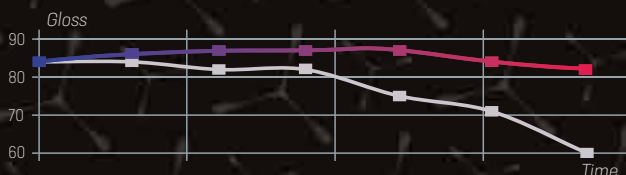

Laboratory certified result obtained with Drop Shape Analyser under ASTM D7334-08 standard : contact angle created by a droplet of water or oil (hexadecane) deposited on a surface.

A treated paint ages 10 times slower.

To demonstrate the strength of ProTech® treatment from daily aggressions, we submitted it to the most extreme tests.

One of them, the WOM (Weather-O-Meter) created by one of the most renowned laboratories in the world, exposed the ProTech® treatment to the most extreme weather conditions. In these extreme conditions, painted surfaces treated with ProTech® treatment were not noticeably dulled to the naked eye.

ProTech® treated paint surface

No visible loss to human eye [-2,4%]

Untreated paint surface

Loss of gloss [-28,6%]

A treated paint offers a protective shield of 9 microns.

Our certified technicians use dedicated machines to apply all three steps of this treatment in optimised conditions to guarantee a permanent result.

STEP 01

Decontamination of the surfaces to improve the adhesion of the treatment.

STEP 02

Application of the protective layer to fight ageing and enhance the brightness of the painted surfaces.

STEP 03

Application of an active hydrophobic/oleophobic coating to guarantee the anti-adhesive and anti-dirt effect.

Smart technology

With everyday use,
your car stays
cleaner for longer.

Taking care of your car
has never been so easy,
fast and enjoyable !

ANTI-ADHESIVE

Surfaces are extremely slippery.
Water runs off treated paintwork.
Drying your car is faster.

ANTI-DIRT

The treatment greatly delays the
deposit of greasy and dirty pollutions.
Cars stay cleaner for longer.

ANTI-AGEING

Treated paint ages 10 times
slower than untreated surfaces.
Colours are intense, deep, and
surfaces are brighter.

3D⁺ 
**ADVANCED
TECHNOLOGY**

Technical features

- Permanent protection | POLLUTION, INSECTS, RESIN, UV RAYS, ETC.
- 9 microns protective shield
- Repellent properties | WATER, GREASY POLLUTION, DIRT
- Effortless cleaning
- Extreme shine, deep colour
- Professional application
- 5-year guarantee

The Procace

After treatment, we give you the Procace. In it you will find all the products and accessories you will need for your car's maintenance and your certificate of authenticity.
